KLAMATH COUNTY
COMMUNITY HEALTH ASSESSMENT
2018
Dear Klamath County Community Members,

“We are building a strong community, and we can only get there together.” It has been an exciting three years since our last Community Health Assessment and significant progress has been made towards health improvement. In 2015, Klamath Falls (and its urban growth boundary) was selected as Oregon’s first Blue Zones Project Demonstration community, and the results have been profound in each sector of focus. Three years ago the community was trying to reach a ‘tipping point’ in which a critical mass of people were engaged in health improvement. Fast forward to 2018 and over 6,000 residents are engaged in the Blue Zones Project and the momentum is still going. Eighteen health policies have passed in the built environment, tobacco, and food systems sectors. Twenty one worksites, 8 schools, 10 restaurants, 7 faith-based organizations, 2 grocery stores, and 1 corner store implemented best-practice health initiatives to become Blue Zones Project Approved.

Another exciting moment was the announcement that Klamath County won the 2018 Robert Wood Johnson Foundation Culture of Health Prize! This prestigious award is akin to winning an Oscar in the public health world, and the competition was stiff. Nearly 200 communities applied and after a yearlong, three-phase application process, Klamath County was one of only four winners nationwide! To join the ranks of Culture of Health Prize winners, we had to demonstrate how the community met the following six prize criteria:

- Defining health in the broadest terms possible;
- Committing to sustainable systems changes and policy-oriented long-term solutions;
- Creating conditions that give everyone a fair and just opportunity to reach their best possible health;
- Harnessing the collective power of leaders, partners, and community members;
- Securing and making the most of available resources; and
- Measuring and sharing progress and results.

As we pause to celebrate our success, we acknowledge that there is still work to do. However, it is important to stop and take a look back at where we have been to fully appreciate how far we
have come. As a rising star in the state, other communities are now looking to learn from us and our successful community health improvement initiatives.

The Community Health Assessment helps us to see where we are making progress and what areas still need improvement. We urge you to get involved in the community health improvement efforts and take small steps to improve your personal health.

A good place to start is reading this Community Health Assessment and connecting with the Healthy Klamath Coalition at HealthyKlamath.org. Join us as we continue building a culture of health in Klamath County.

Warmest Regards from the Core Four,

Tayo Akins, CEO
Cascade Health Alliance

Jennifer Little, Director
Klamath County Public Health

Signe Porter, CEO
Klamath Health Partnership

Paul Stewart, CEO
Sky Lakes Medical Center

Part I. Executive Summary

The Community Health Assessment (CHA) is more than just a final report to read. Conducting the Community Health Assessment is a dynamic process, which enables the health care community to identify current health issues and analyze trends of declining or improving health outcomes. The process also helps community partners gain valuable insight from community members on the factors affecting health and quality of life in Klamath County. This report details the process used to conduct the 2018 Community Health Assessment, the key findings from the assessments that were completed, and the secondary data that was compiled.

The Healthy Klamath Coalition leadership guides community partners through a coordinated effort to complete the Community Health Assessment and the subsequent Community Health Improvement Plan (CHIP). Conducting a joint CHA and a collaborative CHIP allows the health care community to maximize resources, reduce duplication of efforts, and align interventions to have the greatest impact when addressing the needs of the community members we serve.

Two models, Mobilizing for Action through Planning and Partnerships (MAPP) and the County Health Rankings model, were used to guide the 2018 Community Health Assessment process. The MAPP model is a community-wide strategic planning process for improving community health. It is designed to help a community gather both qualitative and quantitative information through primary data collection. The County Health Rankings model focuses on the physical, social, environmental, and health factors that influence health outcomes. The secondary data collection was aligned with the categories in this model as it shows the relationship between policies, programs, and other factors and how they influence health outcomes. The categories mentioned throughout this report include length of life, quality of life, health behaviors, clinical care, social and environmental factors, and physical environment. The Healthy Klamath Coalition understands there are many influences outside of traditional health care that affect how healthy someone is. The use of these models allowed for a comprehensive assessment of the factors in our community, such as access to care, education, and community safety that contribute to overall health and well-being.

The vision of the Healthy Klamath Coalition is a healthy community where all community members have the ability to thrive and live a happy, healthy, and prosperous life. The Community Health Assessment lays the foundation for the Community Health Improvement Plan, in which health issues are prioritized and strategies are identified to address them. This continuous improvement process, made possible by the initiative and collaboration of community members and partner agencies, will enable us to reach this vision for Klamath County.
Part II. Community Overview

Klamath County is a beautiful, rural community located in southern Oregon. Klamath County is named for the Klamath Tribes, who have inhabited the Upper Klamath River Basin region for thousands of years. Geographically, Klamath County is the fourth largest county in Oregon, spanning 5,941 square miles, but is home to only 66,018 people.\(^1\) In the county, the population centers are Bonanza, Chiloquin, Klamath Falls, Malin, and Merrill. The remaining residents live in unincorporated communities spread throughout the county. Klamath Falls is the largest city in Klamath County with 21,113 people and an equally large suburban population.\(^2\) Together they comprise the urban growth boundary (UGB), which is the central hub of activities and services for south central Oregon and northern California. In 2015, the total population of the UGB was estimated at 43,093 people.\(^2\)

Located in the high desert, Klamath County has unique natural resources, which have contributed to the proud history of agriculture in our region. Klamath County’s rich geographic diversity includes parts of the Cascade Range, several bodies of water, including the Klamath River and Upper Klamath Lake, vast farm and rangeland, and arid desert. Klamath County is also home to Kingsley Field Air National Guard Base, Oregon Institute of Technology, Klamath Community College, and Crater Lake National Park.

Demographics

After a decline in population, Klamath County experienced overall population growth from 65,985 in 2014 to 66,018 in 2017.\(^1\)
As shown in the table below, the three largest population groups in Klamath County by race and ethnicity are White (non-Hispanic), Hispanic or Latino, and American Indian and Alaska Native. The Hispanic or Latino population has experienced the most growth, increasing from 10% in 2010 to 12% in 2017. 8% of the population speaks a language other than English. 39% of the population is living with a disability. Also, of note, Veterans comprise 15% of the population.

In Klamath County, the population distribution between males and females is evenly split at 50%. The median age is 42.6 and the largest single age group is those between 45 to 55 years old at almost 13%. Those 65 years and over comprise 19% of the population, while children under the age of 18 comprise almost 22% of the population.
Part III. Healthy Klamath Coalition

The Healthy Klamath Coalition is a multi-sector partnership established to guide community health improvement efforts in Klamath County, Oregon. The community mobilized in 2012, forming the coalition in response to consistently low rankings in the annual Robert Wood Johnson Foundation (RWJF) County Health Rankings. Over the past seven years, dedicated community members, leaders, and organizations have launched numerous initiatives, programs, and policy changes to address the health factors contributing to poor health outcomes in Klamath County. Passionate community leaders and community members are working together to find innovative solutions to address the health issues where we live, learn, work, and play. This momentum is helping build a culture of health in Klamath County.

As a starting point for the ongoing community health improvement efforts, the Healthy Klamath Coalition conducted the first Klamath County Community Health Assessment (CHA) in 2013. It was immediately followed by a Community Health Improvement Plan (CHIP). This in-depth look helped the community collect baseline data and identify pressing health issues. This information was a driving force in bringing the Blue Zones Project to Klamath Falls in 2015. Since then, a second round of CHA and CHIP reports were completed in 2015 and 2016, respectively. The 2018 CHA is the third iteration for the community and will be followed by a CHIP. The cycle for CHA and CHIP completion is now every three years, the minimum amount of time recommended to recognize trends in data and to monitor progress in addressing health issues and poor health outcomes.

An additional asset of the coalition is the Healthy Klamath website at www.healthyklamath.org. The website, which is accessible to the community, serves as a clearinghouse for unbiased community data, indicators, and local health reports. Information on partner coalitions, a community calendar, and other valuable resources are also available on the website.

2018 Robert Wood Johnson Foundation Culture of Health Prize

In recognition of the community’s efforts to improve health outcomes, Klamath County, Oregon was awarded the 2018 Robert Wood Johnson Foundation Culture of Health Prize. This prestigious award celebrates communities that are actively working to improve health in a sustainable and equitable way. On behalf of Klamath County, the Healthy Klamath Coalition applied for the prize in 2017 and went through the nearly yearlong application process, which included submitting two essays, making a community video, and hosting a site visit. Each phase in the application process highlighted the community’s health improvement journey, key health accomplishments, and demonstrated how the community met the six prize criteria. The RWJF Culture of Health Prize criteria are:

- Defining health in the broadest possible terms.
- Committing to sustainable systems changes and policy oriented long-term solutions.
- Creating conditions that give everyone a fair and just opportunity to reach their best possible health.
- Harnessing the collective power of leaders, partners, and community members.
• Securing and making the most of available resources.
• Measuring and sharing progress and results.

Klamath County is proud to be one of only four winners nationwide of the 2018 RWJF Culture of Health Prize. This year, the Klamath Tribes and Klamath County together, were the only federally recognized tribe and rural jurisdiction, respectively, that were among the prize-winning communities. Community collaboration and the numerous community initiatives, spanning well-beyond traditional health care, were instrumental in bringing the prize home for Klamath County.
Part IV. Vision and Values

Vision

The vision of the Healthy Klamath Coalition is a healthy community where all community members have the ability to thrive and live a happy, healthy, and prosperous life. The Healthy Klamath Coalition defines a healthy community as a place that promotes health and well-being for all community members where they live, learn, work, and play. The Healthy Klamath Coalition envisions Klamath County as a community that is diverse, without disparities, livable, active, connected and walkable, prevention-focused, tobacco-free, with a sense of pride and ownership, and no longer the least healthy county in the state.

Values

The Healthy Klamath Coalition promotes and supports the following community values:

- Access to care and services
- Celebrating success
- Collaboration among partner agencies, community members, and all sectors
- Economic prosperity
- Genuine engagement with community members
- Health equity
- Success through education
Part V. Partner Agency Alignment

Many of the Healthy Klamath Coalition partners are health care and behavioral health agencies that are required to conduct a Community Health Assessment or a Community Health Needs Assessment (CHNA). Additionally, there is a requirement for some of these agencies to complete a Community Health Improvement Plan. The following agencies, along with many other community partners, have come together to align their requirements to complete a joint CHA in 2018, which will be immediately followed by a collaborative CHIP. The Mobilizing for Action through Planning and Partnerships (MAPP) model enables community partners to meet their individual agency requirements while working towards a collective vision for community health improvement.

**Cascade Health Alliance (CHA)**
The Oregon Health Authority requires Coordinated Care Organizations (CCOs) to conduct a Community Health Assessment and Community Health Improvement Plan at least every five years.

*Area Served:* Klamath County, Oregon

*Population Served:* Cascade Health Alliance serves people with Medicaid coverage under the Oregon Health Plan (OHP), and Medicare Advantage members through their partnership with ATRIO Health Plans.

**Klamath County Public Health (KCPH)**
The Public Health Accreditation Board (PHAB) requires local health departments to conduct a Community Health Assessment and a Community Health Improvement Plan every five years.

*Service Area:* Klamath County, Oregon

*Population Served:* Klamath County Public Health serves all community members.

**Klamath Health Partnership (KHP)**
The Health Resources & Services Administration (HRSA) requires Federally Qualified Health Centers (FQHCs) to conduct a needs assessment every three years.
Service Area: Klamath County and parts of Lake County, Oregon, as well as Modoc and Siskiyou Counties in northern California.

Population Served: Klamath Health Partnership serves all persons in the service area who pass through their clinic doors regardless of financial, cultural, or social barriers with special emphasis on the underserved.

**Sky Lakes Medical Center (SLMC)**
The IRS requires 501(c)(3) hospital organizations to conduct a Community Health Needs Assessment (CHNA) and a Community Health Improvement Plan every three years.

Service Area: 10,000 square mile area covering Klamath County, Oregon, parts of Lake County, Oregon, and Modoc and Siskiyou Counties in northern California. For the purposes of this report, the primary population served by the medical center is concentrated within the Klamath Falls Urban Growth Boundary. Community health improvement efforts are generally implemented within the UGB in order to have the greatest impact on the greatest number of people.

Population Served: Sky Lakes Medical Center provides health care to anyone who presents to the acute-care hospital, and is proactive in population health activities and initiatives.

**Klamath Basin Behavioral Health (KBBH)**
The Substance Abuse and Mental Health Services Administration (SAMHSA) requires Certified Community Behavioral Health Clinics (CCBHCs) to report on 19 quality measures during the demonstration period. Additionally, the Oregon Health Authority (OHA) requires KBBH to report on select measures to maintain their OHA Letter of Approval.

Service Area: Klamath County, Oregon.

Population Served: Klamath Basin Behavioral Health serves adults, children and adolescents who are eligible for Medicaid coverage under the Oregon Health Plan.

**Blue Zones Project – Klamath Falls (BZP)**
Blue Zones Project – Klamath Falls, now the Healthy Klamath Department at Sky Lakes Medical Center, is not required to conduct a Community Health Assessment or a Community Health Improvement Plan. However, the BZP produces an annual Blueprint plan that aligns with the CHIP to improve health and wellness in Klamath Falls.

Service Area: Klamath Falls, Oregon and its urban growth boundary.

Population Served: Blue Zones Project – Klamath Falls serves all community members.
Part VI. MAPP Model

Mobilizing for Action through Planning and Partnerships (MAPP) is a community-wide strategic planning process for improving public health. This framework helps communities prioritize public health issues, identify resources to address them, and take action to improve conditions that support healthy living.

The MAPP process was developed in 2001 by the Centers for Disease Control and Prevention (CDC) and the National Association of County and City Health Officials (NACCHO). MAPP was developed to provide structured guidance that would result in an effective, comprehensive strategic planning process that would be relevant to public health agencies and the communities they serve. NACCHO recognizes the MAPP process as an optimal framework for community health assessment and improvement planning.

There are nine critical elements of the MAPP process, which lay the foundation for continuous community health improvement. These elements are 1) strategic planning; 2) systems thinking; 3) community ownership and stakeholder investment; 4) shared responsibility and working towards a collective vision; 5) using comprehensive data to inform the process; 6) building on previous experience; 7) partnerships; 8) involving the local public health system; and 9) celebrating successes.

The six-phased MAPP model includes four assessments that guide the Community Health Assessment process. The qualitative and quantitative data collected from the four assessments informs the development, implementation, and evaluation of strategic Community Health Improvement Plans.

Phases in the MAPP Academic Model

**Community Health Assessment**

Phase 1: Organize for Success/Partnership Development

Phase 2: Visioning

Phase 3: Four MAPP Assessments

- Forces of Change Assessment (FOCA)
- Community Themes and Strengths Assessment (CTSA)
- Community Health Status Assessment (CHSA)
- Local Public Health System Assessment (LPHSA)

**Community Health Improvement Plan**

Phase 4: Identify Strategic Issues

*Figure 2. MAPP Academic Model*

Source: MAPP User’s Handbook, September 2013
Phase 5: Formulate Goals and Strategies

Phase 6: Action Cycle

**Process**

Klamath County used the MAPP model to conduct the 2018 Community Health Assessment. The MAPP User’s Handbook, its Health Equity Supplement, training and other resources from NACCHO informed the Community Health Assessment process for Klamath County. The Healthy Klamath Coalition partners participated in each of the MAPP phases, which were completed concurrently.

**Phase 1: Organize for Success/Partnership Development.** The purpose of this phase is to structure a planning process that builds commitment, engages participants, and results in a plan that can be realistically implemented. During this phase, the committees were formed, training was conducted, presentations were given, and the timeline was developed.

**Committees.** The Healthy Klamath Coalition supported this process in its entirety by forming a Core Group, Steering Committee and Assessment Sub-committee.

| Core Group Members | • Healthy Klamath Co-Chairs from Klamath County Public Health and Sky Lakes Medical Center.  
| | • Klamath County Public Health Program Coordinator  
| | • Sky Lakes Medical Center Public Information Officer  
| Steering Committee Agencies | • Blue Zones Project – Klamath Falls  
| | • Cascade Health Alliance  
| | • Klamath Basin Behavioral Health  
| | • Klamath County Public Health  
| | • Klamath Health Partnership  
| | • Department of Human Services – Klamath and Lake Counties  
| | • Oregon Institute of Technology Population Management Program and Research Center  
| | • Sky Lakes Medical Center  
| Assessment Sub-Committee | • Healthy Klamath Coalition Partners  

**Training.** Training was an essential part of this phase. Two members of the Core Group attended the 2-day national MAPP training event hosted by NACCHO in June 2017. Next, the Steering Committee members attended a 1-day training coordinated by Cascade Health Alliance in December 2017. For this training, the Oregon Health Authority Transformation Center provided the technical assistance focused on “Planning a Collaborative Community Health Assessment and Community Health Improvement Plan for your Unique Community.”

**Presentations.** Core Group members also gave presentations on the plan for conducting the Community Health Assessment to the Cascade Health Alliance Community Advisory Council and the
Oregon Institute of Technology Population Health Management Research Center to garner further support and participation.

**Phase 2: Visioning.** The purpose of this phase is to guide the community through a collaborative, creative process that leads to a shared community vision and common values.

A brainstorming session was held with the Healthy Klamath Coalition in February 2018. During the guided session, a visioning handout (Appendix A) was used, which focused on defining a healthy community, the long-term vision for the community, achieving health equity in the community, and identifying shared values.

**Phase 3: Four Assessments.** Used together, the four assessments provide a comprehensive picture of health of our community members and the underlying factors affecting health in our community. The purpose, methods, findings, and limitations for each of the assessments is included in more detail in Part VII.
Part VII. Four MAPP Assessments

Forces of Change Assessment

**Purpose.** The Forces of Change Assessment identifies the forces that may affect a community and the threats and opportunities associated with those forces.

- Forces are a broad all-encompassing category that includes trends, events, and factors.
  - Trends are patterns over time, such as migration in and out of a community or a growing disillusionment with government.
  - Factors are discrete elements, such as a community’s large ethnic population, an urban setting, or a jurisdiction’s proximity to a major waterway.
  - Events are one-time occurrences, such as a hospital closure, a natural disaster, or the passage of new legislation.

**Methods.** In May 2018, 32 members of the Healthy Klamath Coalition met to brainstorm trends, factors, and events that have affected the community either positively or negatively. Participants used the Forces of Change Brainstorming Worksheet (Appendix B) to come up with ideas. Each participant was asked to share one trend, factor, or event, which was then consolidated into the draft list. Following the meeting, members of the Core Group narrowed the list to forces that either directly or indirectly affect health in the community. The forces were also divided into four categories to align with the County Health Rankings model: health behaviors, clinical care, social and economic factors, and physical environment. Then a follow-up meeting was held in June, with 16 participants from the Steering Committee and the Healthy Klamath Coalition to identify the threats and opportunities for the previously identified forces. The Forces of Change—Threats and Opportunity Worksheet (Appendix C) was used for this part of the assessment. This information will be used again during the CHIP process when prioritizing health issues.
Findings.

2018 Community Health Assessment Page | 19
Limitations. Several Healthy Klamath Coalition partners participated in the Forces of Change Assessment; however, no lay community members were represented during this specific assessment. Additionally, the forces that have affected, and continue to affect the Klamath Tribes, leading to a long history of trauma are not adequately represented in this assessment.

Community Themes and Strengths Assessment

Purpose. The Community Themes and Strengths Assessment identifies assets in the community and issues that are important to community members.
**Methods.** On June 27, 2018, the Healthy Klamath Coalition hosted a community forum (Appendix D) at the Klamath County Library. 25 community members attended to provide insight on health and quality of life in Klamath County.

Community Forum Guiding Questions (Appendix E):

1. How would you describe the quality of life in Klamath Falls and in Klamath County?
2. Are you satisfied with the quality of life in our community?
3. Do all individuals and groups have the opportunity to contribute to and participate in the community’s quality of life?
4. What can be done to improve health and quality of life in our community?
5. How do you think we can better engage the community in health improvement efforts?

Below are the common themes and results from the community forum. The results were also categorized to align with the County Health Rankings model categories: health behaviors, clinical care, social and economic factors, and physical environment.

**Findings.**

- **Strengths:**
  - Numerous wellness initiatives in the community focused on diet and physical activity.

- **Weaknesses:**
  - Tobacco use.
  - Substance abuse.
  - Mental health concerns.
  - Suicidal ideation and attempts.

- **Strengths:**
  - The hospital is very involved in the community.
  - There are events like the community health fair.
  - Collaboration between different health and social service agencies.

- **Weaknesses:**
  - Shortage of doctors and mental health providers.
  - Lack of alternative forms of care.
  - Low health literacy.

- **Strengths:**
  - Incredible scenery and natural resources.
  - Inviting place to live.
  - Recent focus on trails, parks, bike lanes, and urban beautification.

- **Weaknesses:**
  - Public transportation is hard to use.
  - Times, location, and cost of transportation.
  - Problems with the Urban Growth Boundary versus the city limits.

- **Strengths:**
  - Focus on education.
  - Options for higher education.
  - Number of people who are involved in making this a better place to live.
  - Community outreach.

- **Weaknesses:**
  - Low socioeconomic status.
  - Disparities between populations.
  - Low housing availability.
  - Jobs are hard to find.
  - There is a need to create more jobs.
  - Homeless families and transient population.

**Limitations.** The drafted set of questions was adapted during the community forum to better flow with the group conversation. The question set can be revised for the future. The Community Themes and Strengths Assessment included participation from lay community members; however, the majority of
participants were Healthy Klamath Coalition partners. More than one forum can be held in the future to increase participation and to ensure participants are more evenly distributed among the groups.

Community Health Status Assessment

**Purpose.** The Community Health Status Assessment provides quantitative information on community health conditions.

**Methods.** A Klamath Community Health Survey was created to collect current, quantitative data to better understand local health status, health concerns, facilitators and barriers to care, and health behaviors of community members. Oregon Institute of Technology Population Health Management students working with the program’s Research Center were instrumental in finalizing and distributing the survey and analyzing results.

The survey, developed in February 2018, was distributed from March to July 2018. The survey (Appendix F) was made available in both English and Spanish and was distributed electronically through Qualtrics and via paper copies. Survey responses were collected at the Sky Lakes Medical Center’s annual health fair, at worksites, and in several community clinics. The clinic locations included Cascade Health Alliance, Klamath Basin Behavioral Health, Klamath County Public Health, Klamath Health Partnership’s Klamath Open Door clinics, Klamath Tribal Health and Family Services, and Sky Lakes Medical Center clinics. A total of 500 surveys were collected. The key findings are listed below.

**Findings.**

**Demographics.**
The top three age ranges of respondents in order were 25-34, 35-44, and 45-54.

The majority of respondents had a Bachelor’s degree or higher, some college, or a high school diploma/GED.

The top three household sizes in order were 2 members, 3 members, and 1 member.

22.63% of respondents reported a household income of less than $20,000. 19.4% of respondents reported a household income of $50,000 to $74,999.

37.55% of respondents had employer sponsored insurance. 26.18% of respondents were enrolled in Medicaid (Oregon Health Plan, Cascade Health Alliance Members). 12.23% of respondents had Medicare coverage. 12.66% of respondents had private insurance.

48.16% of respondents were employed full time. 18.66% of respondents reported “other” employment status, to include being a homemaker, retired, or a student. 13.02% of respondents were employed part time. 8.24% of respondents were unable to work due to a medical condition, disability, etc.
**Health Status.**
The majority of respondents, 37.58%, reported having good health. However, 16.56% reported fair health and 2.97% reported poor health.

When asked, “In the past 30 days, how often did mental health concerns make it hard for you to do your usual activities, such as self-care or work?” almost 31% of respondents answered sometimes, often, or always.

**Transportation.**
6% of the respondents do not have reliable transportation.

52% of the respondents do not find public transportation to be convenient and easy to use.

**Food Insecurity.**
When asked, “In the past 12 months, have you worried that your food would run out before you got money to buy more?” over 20% of respondents answered sometimes, often, or always.

**Housing.**
1.69% of respondents do not have housing, 6.13% of respondents were staying with others, and 5.5% of respondents had housing, but were worried about losing housing in the future.

**Barriers.**
The following issues were identified as preventing a respondent from using health care services in the past 12 months: cost, transportation, insurance, childcare, work, distance/weather concerns, illness/disability, or could not get an appointment.

12.74% of respondents had missed or skipped a medical, dental, or mental health appointment in the past 30 days.

When asked, “Is there anything you feel is keeping you from having better health?” the top three responses in order were lack of physical activity, cost, and chronic illness.

**Limitations.** Although the survey was made available in Spanish, only a few people chose to utilize this option; however, none of those surveys were completed. In the future, the survey could be piloted with Spanish speaking members of the community. It was unclear if translation services were available in person to assist with completing the survey. Additionally, the majority of the respondents were female. Efforts can be made in the future to have a more even distribution of surveys by gender. Finally, attempts to distribute surveys electronically through established distribution channels, such as worksite wellness committees were not very successful. Improved coordination and increased planning time in the future can help to alleviate this issue.
Purpose. The Local Public Health System Assessment measures how well the different partners who comprise the local public health system work together to deliver the Essential Public Health Services (EPHS).

Methods. Using the National Public Health Performance Standards Local Assessment Instrument and the MAPP User’s Handbook: Health Equity Supplement, a modified LPHSA survey was created. The survey was divided into 11 categories with three questions each. The categories represented the Ten Essential Public Health Services and health equity. The electronic survey created in SurveyMonkey was distributed to a wide variety of community organizations over a period of one month. Although there were an initial 52 respondents, there were only 31 fully completed surveys. Community partners representing many different sectors, to include health care and behavioral health agencies, City and County government, other government offices, City and County school districts, higher education institutions, nonprofit organizations, social service organizations, and local businesses all completed this assessment.

Findings. Using a 5-point Likert Scale (never, rarely, occasionally, frequently, and very frequently), each respondent answered to what extent their organization participates in the provided activities. The responses for the three questions for each of the Essential Public Health Services (EPHS) categories and health equity were then averaged to get the below results.

| EPHS 1  | Monitor Health Status to Identify and Solve Community Health Problems | Frequently |
| EPHS 2  | Diagnose and investigate Health Problems and Hazards in the Community | Occasionally |
| EPHS 3  | Inform, Educate, and Empower People about Health Issues | Occasionally |
| EPHS 4  | Mobilize Community Partnerships to Identify and Solve Health Issues | Frequently |
| EPHS 5  | Develop Policies and Plans that Support Individual and Community Health Efforts | Frequently |
| EPHS 6  | Enforce Laws and Regulations that Protect Health and Ensure Safety | Frequently |
| EPHS 7  | Link People to Personal Health Services and Assurance the Provision of Health Care if it is Unavailable | Frequently |
| EPHS 8  | Assure Competent Public and Personal Health Care Workforce | Frequently |
| EPHS 9  | Evaluate Effectiveness, Accessibility, and Quality of Personal and Population-Based Health Services | Occasionally |
| EPHS 10 | Research for New Insights and Innovative Solutions to Health Problems | Occasionally |
| Health Equity | Reduce and eliminate disparities in health and its determinants that adversely affect excluded or marginalized groups | Frequently |
**Limitations.** Many of the surveys were not completed. This could indicate the survey was too long or not applicable to the respondents. Additionally, the 5-point Likert Scale used was not as effective in gauging participation in each activity as was expected. A 3-point scale (limited, moderate, and significant) would have been more effective in assessing the survey results.
Part VIII. Indicators

County Health Rankings Model

The County Health Rankings is a collaboration between the Robert Wood Johnson Foundation (RWJF) and the University of Wisconsin Population Health Institute. Conducted annually, the County Health Rankings measure the health of almost all counties in the nation and compare them to the other counties in their respective state. The Rankings are based on a population health model that emphasizes the many factors that can be improved to help make communities healthier places to live, learn, work and play.

The goal of the Rankings is to raise awareness about the many factors that influence health and why health outcomes vary from place to place. The goals of the Healthy Klamath Coalition include improving the overall health of our community and making the healthy choice the easy choice. This is done through the implementation of policies and programs that influence health factors and overall health outcomes. The goal is not simply to raise the county’s health ranking, but to make lasting changes that improve the health of our community members and future generations. It is through these changes that we anticipate seeing Klamath County advance in the health rankings.

The 2018 Community Health Assessment data collection and analysis is aligned with the County Health Rankings model. This comprehensive model includes Health Outcomes, which are length of life (mortality) and quality of life (morbidity), and Health Factors, which are the determinants that influence health and overall outcomes. The outcomes and factors are then broken down into components and subcomponents. The components inform the categories for the 2018 Community Health Assessment, while the subcomponents include the specific indicators and data analysis for each area. Additional behavioral health and maternal and child health components were added.
**Data Collection and Analysis**

The indicators section is comprised of various levels of secondary data: the county as a whole, Klamath Falls when applicable, and the metrics for each participating partner agency. The county-level data was retrieved from a variety of sources, including the American Community Survey, the Healthy Klamath website, and the Oregon Public Health Assessment Tool.

A fact sheet format was used to compile and display the data. This format makes it easier to understand the information and share the individual components. Although the data is not all-inclusive of the health issues affecting the community, it provides a robust overview of factors influencing the health outcomes seen in Klamath County. Key findings are highlighted throughout the document and called out on each fact sheet.

**Health Equity.**

The Robert Wood Johnson Foundation defines health equity as everyone having a fair and just opportunity to be healthier. RWJF emphasizes that equity is not the same as equality, as those with worse health and less resources need more assistance to improve their health.

Health disparities are present when there are differences in length of life, quality of life, disease rates, and access to resources that negatively affect certain population groups more than others. Health inequities also exist within the social determinants of health, in which population groups have less access to the resources and opportunities necessary to achieve optimal health and well-being.

The population groups who are disproportionately affected by health inequities include, but are not limited to, racial and ethnic minorities, people representing the LGBTQ (lesbian, gay, bisexual, transgender, questioning, queer) community, people with disabilities, and other vulnerable populations, such as those who qualify as low-income. Stratified county-level data is not readily available to measure the health disparities faced by these communities. However, public health research can inform the areas for intervention to address health inequities and improve health outcomes.

**Limitations.**

There are some limitations that affect the availability and quality of data used in the Community Health Assessment. For some of the areas included in this assessment, indicators are not available or data is outdated and does not reflect the current state of health. County-level data by race and ethnicity is...
limited affecting the ability to measure health disparities in the community. Some data may be duplicative, as agency-level data may be included in overall county data, so the data for the two agencies should not be compared. For example, Cascade Health Alliance members are oftentimes patients with Klamath Health Partnership. Overall, the data is not all-inclusive of the health factors and outcomes present in the community.
DEATH RATE

Death rates are generally higher in rural areas than in urban areas. Klamath County has consistently had a higher overall death rate than the state of Oregon. The total death rate in Klamath County increased from 880 in 2014 to 927 per 100,000 in 2017. With this rate, Klamath County moves into position with the highest death rate in Oregon. Although the total death rate is worsening, the tobacco-related death rate is improving, having decreased from 247 in 2014 to 209 per 100,000 in 2017.

CANCER DEATH RATE

In Klamath County in 2017, malignant neoplasms, or cancer, was the leading cause of death. From 2011 to 2015 the cancer death rate was 172 per 100,000. This is higher than the cancer death rate for Oregon, at 165 per 100,000, and the United States, at 164 per 100,000, during the same time period.

The cancer death rate varies greatly by race and ethnicity. In Klamath County, the American Indian and Alaska Native population has the highest cancer death rate at 182 per 100,000. The White, non-Hispanic population has a cancer death rate of 171 per 100,000. While the Hispanic population has the lowest cancer death rate at 80 per 100,000.

In Klamath County from 2011 to 2015, lung cancer was the leading cause of cancer death, followed by breast cancer in women.
According to the Centers for Disease Control, injury is the leading cause of death for children and adults between the ages of 1 and 45 in the United States. Injury deaths are classified as unintentional or intentional. Examples of unintentional injury deaths include motor vehicle accidents, falls, overdoses, etc. Intentional injury deaths include homicides and suicides. Injury deaths are preventable and affect everyone, regardless of age, race and ethnicity, or income.

In Klamath County, unintentional injuries, or accidents, were the fourth leading cause of death in 2017. While intentional self-harm, or suicide, moved from the ninth leading cause of death in 2016 to the fifth leading cause of death in 2017. The State of Oregon continues to place an emphasis on preventing injury deaths, to include suicide and opioid-related deaths.

Rates of death by suicide have increased across the United States since 1999. Additionally, suicide death rates are typically higher in rural areas than in urban areas. In Klamath County, the suicide rate has consistently been higher than the Oregon and United States rates. After a downward trend in the suicide death rate in Klamath County, decreasing from 34 per 100,000 in 2014 to 22 per 100,000 in 2016, the suicide death rate increased to 47 per 100,000 in 2017. This is more than double the Oregon rate at 19 per 100,000 deaths and the United States rate at 14 per 100,000.

In Klamath County, the rate of drug overdose deaths increased from 7 to 11 per 100,000 from 2014-2016, surpassing the state average of 10 per 100,000 from 2014-2016. However, the overdose death rate for each specific type of drug decreased. From 2014-2016 in Klamath County, overdose deaths from methamphetamine and psychostimulants was the highest, followed closely by overdose deaths from any opioids.
In Klamath County, total life expectancy by race and ethnicity ranges from 69 years of age at the lowest to 81 years of age at the highest. The Hispanic population has the highest life expectancy, while the American Indian and Alaska Native population has the lowest life expectancy.

When assessed by gender and race and ethnicity, life expectancy ranges from 62 years of age at the lowest to 86 years of age at the highest. Overall, Hispanic women have the highest life expectancy, followed by Hispanic men and White women. American Indian and Alaska Native men and women have the lowest life expectancy.
Life expectancy is impacted by the social determinants of health. There are five key areas, or determinants, which comprise the social determinants of health. They are economic stability, education, social and community context, health and health care, and neighborhood and built environment.

Healthy People 2020 defines social determinants of health as the conditions in the environments in which people are born, live, learn, work, and play that affect a wide range of risk factors, health and functioning, and quality of life. These conditions are often referred to as “place”.

Specific examples of how place impacts health include education and income, unsafe or unhealthy housing, limited opportunities to exercise, walk, cycle, or play, proximity to highways, access to primary care doctors, unreliable or expensive public transit, and racial segregation. Differences in the social determinants of health for the population can have a tremendous impact on life expectancy.

Based on where someone lives, down to the census tract level, there is a 15-year difference in life expectancy in Klamath County. Simply put, place matters.
QUALITY OF LIFE

Quality of life is how healthy people feel. This includes overall health, physical health, mental health, and social functioning.

WELL-BEING INDEX

Well-being is defined as the state of being happy, healthy, or prosperous. It emphasizes a person’s physical, mental, and social resources and enhances protective factors that foster health. The Blue Zones Project—Klamath Falls uses the Gallup-Sharecare Well-Being Index to measure overall well-being in our community. Purpose, social, financial, community, and physical aspects all contribute to well-being. The Well-Being Index ranges from 0 to 100, with higher scores being better. Nationwide, well-being has declined. In Klamath Falls, the overall well-being score is holding steady at 59.6 in 2018. This is higher than the Oregon WBI in 2017 at 58.8 and the WBI for the United States in 2018 at 59.

HEALTH STATUS

Health status measures show the impact that chronic conditions, disabilities, and health behaviors have on overall well-being and how healthy someone feels. General health status reflects the percentage of adults who rate their health as fair or poor. Poor mental health and physical health days reflect how many days in the past 30 days that someone’s mental or physical health was not good. In addition, poor physical or mental health can limit daily activities or require the use of special equipment.

When compared to the 2010-2013 period, there was improvement in general health status in Klamath County from 2012-2015, although 1 in 5 adults still have poor or fair health. There was a decrease in activity limitations due to poor health. Poor mental health days increased while poor physical health days remained the same. There was also an increase in poor physical or mental health limiting daily activities or requiring the use of special equipment.

</table>
Chronic diseases, or conditions, are defined as conditions that last for 1 year or more and require ongoing medical care. Chronic conditions can also limit daily activities. Most chronic conditions are caused by certain health behaviors, or risk factors, such as cigarette smoking or not exercising.

In Klamath County, the prevalence of most chronic conditions is increasing. Arthritis, asthma, depression, and diabetes have increased while there was a slight decrease in high cholesterol.

However, in one clinical setting there have been improvements. Klamath Health Partnership is the Federally Qualified Health Center in Klamath County. In the Klamath Health Partnership patient population in 2017, there was a decline in asthma, diabetes, and high blood pressure.

For all cancers in Klamath County, the cancer incidence rate from 2011 to 2015 was 456 per 100,000 people. From 2011 to 2015, the three most common types of cancer in Klamath County were breast cancer in women, prostate cancer, and lung cancer.
HEALTH DISPARITIES

Health disparities are differences in health that can be closely linked to social, economic, or environmental disadvantages.

Health disparities are evident when there is a higher burden of illness, injury, disability, or mortality experienced by one group as compared to another. According to Healthy People 2020, health disparities adversely affect groups of people who have systematically experienced greater obstacles to health based on race and ethnicity, socioeconomic status, age, gender, disability status, sexual orientation, and geographic location, or other characteristics historically linked to discrimination or exclusion. For example, people of color and low income individuals are more likely to be uninsured, face barriers to accessing care, and have higher rates of certain conditions compared to individuals who are white or those individuals with a higher income. These factors contribute to a person’s ability to achieve overall good health. Health equity, in which all people have a fair and just opportunity to achieve optimal health, can only be achieved when inequities are addressed and all health disparities are eliminated.

Although health disparities can be looked at from many different lenses, disparities by race and ethnicity are identified in this Community Health Assessment. In Klamath County, the three largest population groups are White at 79%, Hispanic at 12%, and American Indian and Alaska Native at 3% of the total population. Additionally, the Asian, Black or African American, and Native Hawaiian and other Pacific Islander population groups, each comprise less than 1% of the population in Klamath County. When assessing health outcomes and existing conditions, the health disparities become evident. The minority groups have much worse health outcomes than the majority group in the county.

In Klamath County, the American Indian and Alaska Native population group has the highest overall death rate and the highest cancer death rate. The Black or African American population has the highest cancer incidence rate. Although the White population has the second highest cancer incidence rate, this is followed closely by the American Indian and Alaska Native population group with the third highest cancer incidence rate in Klamath County.
**HEALTH BEHAVIORS**

Health behaviors are the actions people take that contribute to overall health status. They are influenced by social and environmental factors where people live, learn, work, and play.

---

**TOBACCO USE**

Cigarette smoking causes cancer, heart disease, stroke, and lung diseases such as emphysema, bronchitis, and chronic airway obstruction. Cigarette smoking also contributes to low birth weight and other poor health outcomes. Secondhand smoke exposure can lead to lung cancer and heart disease. Although smokeless tobacco is less lethal than smoking, it can lead to various cancers, gum and teeth problems, and nicotine addiction. Tobacco use also has economic impacts. Treating tobacco-related illnesses contributes to rising health care costs. Additionally, tobacco use by employees costs employers in productivity losses.

Tobacco use is higher in rural areas than in urban areas. With almost one quarter of adults who smoke in Klamath County, the cigarette smoking rate remains above the Oregon average at 17% and the United States average at 16% in 2015.¹²

---

**DIET AND EXERCISE**

Eating a healthy diet and maintaining a healthy bodyweight contribute to a person’s overall health status. An unhealthy diet increases the risk for many health conditions, to include, but not limited to, overweight and obesity, heart disease, high blood pressure, Type 2 diabetes, and oral disease. Poor nutrition affects the growth and development of children.

Having access to fruits and vegetables is an important part of having a healthy diet. The Food Environment Index, ranging from 0 (the worst) to 10 (the best), measures the combination of food insecurity and access to healthy foods. In Klamath County, the Food Environment Index has improved from 6.1 in 2015 to 6.6 in 2018.¹³

A poor diet and physical inactivity contribute to overweight and obesity. Physical inactivity increases the risk for many health conditions, to include some cancers, heart disease, and diabetes. Obesity is one of the largest contributors to preventable chronic disease in the United States. Being overweight or obese increases the risk of many health conditions, to include cancer, heart disease, high blood pressure, Type 2 diabetes, stroke, Alzheimer’s disease, osteoarthritis, and respiratory problems.

HEALTH BEHAVIORS

ALCOHOL AND SUBSTANCE USE

Heavy drinking is defined as consuming more than two drinks a day for men, or one drink a day for women, in the past 30 days. While binge drinking is having five or more drinks on one occasion for men, or four or more drinks on one occasion for women, in the past 30 days. In the short-term, excessive drinking can lead to alcohol poisoning and can contribute to intimate partner violence, risky sexual behaviors, and motor vehicle accidents. Excessive alcohol consumption is also a risk factor for some cancers, heart disease, high blood pressure, fetal alcohol syndrome, and liver disease. In Klamath County, 4% of adults reported heavy drinking, while 12% reported binge drinking in the past 30 days.10

Recreational marijuana was legalized in 2014 in Oregon. According to the Centers for Disease Control, heavy marijuana use (daily or almost daily) can affect memory, learning, and attention, which can last for a week or more. Smoking marijuana can also damage lungs and the cardiovascular system. In Klamath County, marijuana use increased from 22% in 2014 to 30% in 2016.10

Overall drug overdose hospitalizations decreased in Klamath County from 51 per 100,000 population from 2009-2011 to 50 from 2012-2014.14 However, this is still higher than the Oregon rate at 37 per 100,000.14 In Klamath County, overdose hospitalizations for psychotropic drugs increased from 15 per 100,000 from 2009-2011 to 19 from 2012-2014.4 While overdose hospitalizations for any opioid use decreased from 13 per 100,000 from 2009-2011 to 12 from 2012-2014.14

SEXUAL ACTIVITY

Risky sexual behavior, which includes having unprotected sex and having a high number of lifetime sexual partners, can lead to sexually transmitted infections (STIs) and unintended pregnancies. Nationwide, rates of STIs, also known as sexually transmitted diseases, are increasing. Specifically, in Klamath County, rates of gonorrhea and chlamydia have increased. Gonorrhea rates per 100,000 people increased from 100 in 2014 to 129 in 2017, higher than the Oregon rate at 107.15 Chlamydia rates per 100,000 people increased from 484 in 2014 to 555 in 2017, higher than the Oregon rate at 485.15

Effective contraceptive use among Cascade Health Alliance members is increasing. This is the percentage of women at risk of unintended pregnancy who use one of the most effective or moderately effective contraceptive methods. In Klamath County, teen pregnancy rates are decreasing. Pregnant teens are less likely to receive prenatal care and are more likely to have pre-term or low birth weight babies.
Access to care includes having health insurance coverage and the availability of local health care providers and facilities.

Having health insurance is an important part of being able to access primary care or other health care services. However, having health insurance does not always ensure access to care. Access to care includes affordability, having available providers, and having health care options that are close by and easy to use. Some barriers to accessing care that must be addressed include cost, transportation, and navigating the complex health care system.

Those who are uninsured are less likely than the insured to have a clinic or doctor that they visit on a routine basis. People without insurance receive less preventative care, dental care, chronic disease management, and behavioral health counseling. This often leads to being diagnosed later and postponing treatment. This results in generally worse health outcomes and lower quality of life for those without insurance.

保健专业短缺地区

The Health Resources and Services Administration (HRSA) has designated Klamath County as a Health Professional Shortage Area (HPSA). Areas are assessed on the availability of primary care, mental health, and dental health providers based on geographic region, population served, or facility type. Health Professional Shortage Areas are scored on a scale of 0-25 for primary care and mental health care, and 0-26 for dental health care. Higher scores mean greater need.

In Klamath County, there is a shortage of primary care providers available to serve the low income population. It often takes months to be seen by a new primary care provider. There is also a shortage of dental providers to serve low income, migrant farmworker, and homeless populations in Klamath County. The entire Southcentral Oregon geographic region has a shortage of mental health providers.

Klamath Health Partnership is the Federally Qualified Health Center (FQHC) in Klamath County and receives facility-based HPSA scores. FQHCs are health centers that provide primary care to an underserved area or population. FQHCs provide comprehensive services and offer a sliding fee scale.
ACCESS TO CARE

A coordinated care organization (CCO) is a local network of physical, behavioral, and dental health care providers who work together to serve people receiving Medicaid health care coverage under the Oregon Health Plan (OHP). The CCOs in Oregon strive to meet the triple aim of better care, better health, and lower costs. Cascade Health Alliance (CHA) is the CCO in Klamath County.

Cascade Health Alliance’s focus includes preventing and managing chronic conditions, reducing unnecessary hospital utilization, and providing their members with the support they need to be healthy. Data on access to care for the CCOs in Oregon is based off of survey results asking OHP members if they thought they received appointments and care when they needed them. 85% of all CHA patients had adequate access to care in 2017. Slightly below the statewide average, 80% of adults who are CHA members received adequate access to care in 2017. While 92% of children who are CHA members received adequate access to care, which is above the statewide average of 89%.

COORDINATED CARE ORGANIZATION

CCOs have metrics, such as those below, that demonstrate access to care. A patient-centered primary care home is when a primary care provider helps coordinate care with other providers and specialists to address a patients’ health care needs, thus improving quality of care. CHA has exceeded the 60% target for patient-centered primary home care enrollment, increasing to 85% in 2016. The number of adolescent well-care visits for CHA members is improving. Adolescent well-care visits are the percentage of adolescents and young adults (ages 12-21) who have had at least one well-care visit in a year.

Emergency Department (ED) Utilization is the rate of patient visits to an emergency department. Rates are reported per 1,000 members. A lower number is better as it suggests patients are seeking health care prior to needing to visit the emergency room. Follow up after hospitalization for mental illness is an important part of case management to ensure patients are connected to the care and resources they need to support their overall health and well-being.
Improving quality of care also includes eliminating barriers to receiving appropriate preventative screenings, which help improve health outcomes and reduce costs. Despite health insurance coverage for most preventative screenings, completion rates for receiving recommended screenings are generally low. In Klamath County, overall preventative screenings have declined. For Cascade Health Alliance, colorectal cancer screenings have increased, while depression screenings decreased. For Klamath Health Partnership, all screenings increased from 2015 to 2016. However, there were some declines in screening from 2016 to 2017. Of note, tobacco screenings increased for KHP clients from 4% in 2015 to 35% in 2017. Additionally, for KHP clients, mammograms decreased from 61 tests in 2015 to 36 tests in 2017, while pap tests decreased from 585 in 2015 to 572 in 2017, after peaking at 843 in 2016.

Improving quality of care also includes eliminating barriers to receiving appropriate preventative screenings, which help improve health outcomes and reduce costs. Despite health insurance coverage for most preventative screenings, completion rates for receiving recommended screenings are generally low. In Klamath County, overall preventative screenings have declined. For Cascade Health Alliance, colorectal cancer screenings have increased, while depression screenings decreased. For Klamath Health Partnership, all screenings increased from 2015 to 2016. However, there were some declines in screening from 2016 to 2017. Of note, tobacco screenings increased for KHP clients from 4% in 2015 to 35% in 2017. Additionally, for KHP clients, mammograms decreased from 61 tests in 2015 to 36 tests in 2017, while pap tests decreased from 585 in 2015 to 572 in 2017, after peaking at 843 in 2016.
Risk factors for heart disease and stroke include high cholesterol, high blood pressure, cigarette smoking, diabetes, unhealthy diet, physical activity, overweight and obesity. High cholesterol contributes to stiffening and narrowing of the arteries, while high blood pressure can damage the arteries and other blood vessels. These factors increase the risk for heart disease, heart attack, and strokes.

For Klamath Health Partnership, the following two measures indicate risk for repeat heart disease and stroke events. Coronary Artery Disease (CAD): Lipid Therapy is the percentage of patients aged 18 years and older with a diagnosis of CAD who were prescribed a lipid-lowering therapy. Lipids are fats or fat-like substances found in the bloodstream, that include cholesterol and triglycerides. Lipid lowering therapy for patients with established CAD and high lipid levels helps reduce the likelihood of further CAD-related events. Ischemic Vascular Disease (IVD): Use of Aspirin is the active diagnosis of IVD in patients who used aspirin or other antiplatelet treatment during the same period. For patients with a history of IVD, using aspirin or another antiplatelet drug can reduce the likelihood of myocardial infarctions (heart attacks) and other vascular events. Klamath Health Partnership has increased the use of lipid therapy and aspirin therapy since 2015.

Evidence suggests that implementing comprehensive disease management programs can improve quality of care and quality of life. This includes regular screenings, monitoring and controlling conditions, and making positive behavioral changes to improve health outcomes.

Addressing risk factors early on and learning how to manage chronic conditions is important for preventing disease or for avoiding complications from existing conditions such as cardiovascular disease or diabetes. For example, controlling high blood pressure can reduce risk. Furthermore, effective therapy and lifestyle modifications can prevent or delay onset or complications from diabetes or other chronic conditions. Complications are more common and severe among people whose conditions are poorly controlled. Chronic condition management among patients is a priority for both Cascade Health Alliance and Klamath Health Partnership, with both having seen an improvement in the percent of patients who are managing their diabetes effectively.
Healthy People 2020 provides the following description of mental health, mental disorders, and mental illness: “Mental health is a state of successful performance of mental function, resulting in productive activities, fulfilling relationships with other people, and the ability to adapt to change and to cope with challenges. Mental health is essential to personal well-being, family and interpersonal relationships, and the ability to contribute to community or society. Mental illnesses are health conditions that are characterized by alterations in thinking, mood, and/or behavior that are associated with distress and/or impaired functioning. Mental illness can contribute to a host of problems that may include disability, pain, or death. Mental illnesses, such as depression and anxiety, affect people’s ability to participate in health-promoting behaviors. In turn, problems with physical health, such as chronic diseases, can have a serious impact on mental health and decrease a person’s ability to participate in treatment and recovery.”

As the Community Mental Health Program in Klamath County, Klamath Basin Behavioral Health (KBBH) provides outpatient mental health and substance use disorder services that are evidence-based or best practice. KBBH’s services also include crisis services, screening, assessment and diagnosis, psychiatric services, medication management, peer support, treatment planning, in-home services, and intensive outpatient, respite, and residential care. KBBH’s crisis services include providing a 24-hour mobile crisis team, emergency crisis intervention services, and crisis stabilization. From 2015 to 2018, KBBH provided crisis services to 5,786 adults and youth. On-site primary care will be added in 2019.

According the United States Department of Health and Human Services, more than one in four adults who have a serious mental health problem also have a substance use problem. It is common to have co-occurring mental health problems and substance use disorders. This can be attributed to certain illegal drug use causing symptoms of a mental health problem, a mental health problem leading to drug or alcohol use, or mental health problems and substance use disorders sharing the same underlying cause such as exposure to stress or trauma. Among other mental health problems, KBBH screens for and provides services for substance use, depression, and tobacco use. The 2018 for KBBH data is shown below.
Maternal and child health focuses on pregnant and postpartum women, infants, and children. This is important for decreasing risks and improving birth outcomes.

Early prenatal care (care during the first trimester of pregnancy) is essential for identifying and addressing health problems or risky health behaviors that can affect the health of the mother and developing fetus. Early prenatal care reduces the risk of complications during pregnancy and childbirth. Inadequate prenatal care contributes to poor birth outcomes, such as low birth weight and an increased risk for infant mortality.

Klamath County Public Health, the local health department, offers the Women, Infants, and Children (WIC) supplemental nutrition program to improve birth outcomes and the health of infants and children. In Klamath County, the percent of pregnant women eligible for the Oregon Health Plan who enroll in WIC has consistently remained above 75% and also above the state average. On average, 54% of women eligible for WIC enroll during the first trimester of pregnancy, also above the state average.

For the local Coordinated Care Organization, Cascade Health Alliance, timeliness of prenatal care is the percentage of pregnant women who received a prenatal care visit within the first trimester or within 42 days of enrollment in the Oregon Health Plan. The timeliness of prenatal care for Cascade Health Alliance clients decreased from 91% in 2016 to 89% in 2017, below the state average at 91%.

For Klamath Health Partnership clients, access to prenatal care is improving. Entry into prenatal care during the first trimester for KHP clients improved from 73% in 2015 to 78% in 2017.
**MATERNAL AND CHILD HEALTH**

**LOW BIRTH WEIGHT**

Low birth weight is when a baby is born weighing less than 2,500 grams (5 pounds, 8 ounces). The two main causes of low birth weight are premature birth, before 37 weeks of pregnancy, and restricted fetal growth, when a baby does not gain the weight they should before birth. There are several medical, environmental, and behavioral risk factors which can contribute to low birth weight. Some of which are having a history of premature birth, being pregnant with multiples, certain chronic conditions, substance use, exposure to air pollution or lead, low socioeconomic status, or domestic violence.

Some babies born with a low birth weight are healthy. However, low birth weight is a risk factor for serious short-term and long-term health problems. The short-term health problems can include trouble eating, gaining weight, and fighting off infections. Babies born at a low birth weight are more likely than babies born at a normal weight to develop health conditions later in life. These conditions include heart disease, diabetes, high blood pressure, and obesity.

Low birth weight in Klamath County is improving, having decreased from 9% in 2015 to 8% in 2017. Among Klamath Health Partnership patients, babies born with a low birth weight decreased overall from 13% in 2015 to 10% in 2017.

**INFANT MORTALITY**

The infant mortality rate is the deaths per 1,000 live births for infants within their first year of life. Infant mortality is an indicator of the overall health status of a community. The leading causes of death among infants include birth defects, pre-term delivery, low birth weight, Sudden Infant Death Syndrome (SIDS), and maternal complications during pregnancy. The infant mortality rate in Klamath County has more than doubled from 3.8 per 1,000 live births in 2014 to 10.1 per 1,000 live births in 2017 and is almost double the Oregon rate at 5.4 per 1,000 live births.
The Klamath County Public Health WIC program encourages mothers to breastfeed, unless there is a medical reason not to. WIC provides support to help mothers and infants be successful with breastfeeding. Exclusive breastfeeding is when the infant only receives breast milk without any additional food or drink, not even water. Exclusively breastfeeding for the first 6 months is the optimal way to provide the nutrition an infant needs for healthy growth and development. Exclusive breastfeeding also helps to reduce infant mortality from illnesses. In 2017 in Klamath County, 32% of mothers enrolled in WIC were exclusively breastfeeding at 6 months. This has been consistently lower than the Oregon average at 43% for each year from 2015 to 2017.

Developmental screenings represent the percentage of children who were screened for risks of developmental, behavioral, and social delays using standardized screening tools in the 12 months preceding their first, second, or third birthday. As many as 1 in 4 children are at risk for developmental delays. The American Academy of Pediatrics recommends early childhood screenings to identify and address delays during the most critical period of development. Cascade Health Alliance has improved in the number of developmental screenings provided for their members who are children less than 36 months of age. Having increased from 55% in 2015 to 85% in 2017, Cascade Health Alliance has consistently exceeded the target for developmental screenings.

Children who are overweight or obese are more likely to remain overweight or obese as adults and are more likely to develop chronic conditions, such as cardiovascular disease, diabetes, or asthma at a younger age. For Klamath Health Partnership, Weight Assessment and Counseling for Nutrition and Physical Activity is the percentage of patients 3-17 years of age who had their height, weight, and body mass index (BMI) measured during a doctor appointment. Screenings among Klamath Health Partnership clients who are children have increased from 3% in 2015 to 14% in 2017.
The benefits of immunizations, or vaccines, are preventing the spread of infectious disease and protecting vulnerable populations, such as babies and the elderly. Immunizations are an evidenced-based way to save lives, prevent cases of disease and outbreaks, and reduce health care costs. According to Healthy People 2020, Approximately 42,000 adults and 300 children in the United States die each year from vaccine-preventable diseases.

Dental sealants protect against 80% of cavities for up to two years. According to the Centers for Disease Control, children ages 6 to 11 without dental sealants have almost three times more cavities than children with sealants. Children who are low income are 20% less likely to have dental sealants and twice as likely to have untreated cavities than children from a higher income background. Untreated cavities can cause pain, problems eating, speaking, learning, and infections that can affect overall physical health.
Social support comes from relationships with family members, friends, coworkers, and acquaintances. Social capital refers to the features of society that facilitate cooperation for mutual benefit, such as interpersonal trust and civic associations. Social support and areas with high social capital are protective factors for physical and mental health and promote healthy behaviors. People who have a higher level of education and higher income are more likely to have greater social support than those with less educational attainment or income. Additionally, people from areas with low social capital are more likely to rate their health status as fair or poor than those from areas with high social capital.

Adults and children in single-parent households are at-risk for social isolation and have an increased risk of adverse health outcomes, to include mental illness and unhealthy behaviors. Children from single-parent households have an increased risk for illness, chronic conditions, and mortality.

The Blue Zones Project—Klamath Falls uses the Gallup-Sharecare Well-Being Index to measure social well-being and purpose in our community. Knowing your sense of purpose has been associated with an increase in life expectancy. With a range from 0 to 100, with higher scores being better, the social well-being score for Klamath Falls was 64.4 in 2018. This was higher than the state and national averages at 62.1 and 62.4, respectively. In Klamath Falls, purpose was measured at 59.9. This was also higher than the state and national averages at 56 and 57.3, respectively.
SOCIAL AND ECONOMIC FACTORS

There are three categories of crime for which offenses and arrests are reported. Crimes against persons (homicide, kidnapping, assault, etc.), crimes against property (robbery, motor vehicle theft, vandalism, etc.), and behavioral, or society crimes (violations of drug laws, driving under the influence of intoxicants (DUII), disorderly conduct, etc.). The most frequent type of crime in Klamath Falls is crimes against property. Overall, crime has decreased significantly in Klamath Falls. It is important to note that although the number of offenses reported is higher than arrests, one offender can commit multiple offenses during a singular incident. Although the data indicates an increase in crime from 2016 to 2017, this is attributed to the Klamath Falls Police Department adopting the more stringent reporting requirements established by the Oregon National Incident Based Reporting System (NIBRS), which includes seven additional categories.

COMMUNITY SAFETY

All law enforcement agencies in Oregon are required to report crime statistics. However, not all agencies are up-to-date with state and national reporting requirements nor using the most current system to report crime. These systems include Oregon Uniform Crime Reporting (OUCR), the Oregon National Incident Based Reporting System (ONIBRS), and the National Incident Based Reporting System (NIBRS). All Oregon law enforcement agencies are required to transition to and comply with ONIBRS or NIBRS by 2021.

Overall in Klamath County, there are four law enforcement agencies covering different jurisdictions. These include the Klamath County Sheriff’s Office, the Klamath Falls Police Department, the Malin Police Department, and the Merrill Police Department. Additional agencies which report crime data from Klamath County are the Oregon Liquor Control Commission and the Oregon State Police. At the present time, due to variances in both reporting and using the most current systems, comprehensive crime data is only available from the Klamath Falls Police Department and the Oregon State Police. It is important to note that all agencies focus on crime prevention. However, at this time, overall crime data for Klamath County is unavailable.

There are three categories of crime for which offenses and arrests are reported. Crimes against persons (homicide, kidnapping, assault, etc.), crimes against property (robbery, motor vehicle theft, vandalism, etc.), and behavioral, or society crimes (violations of drug laws, driving under the influence of intoxicants (DUII), disorderly conduct, etc.). The most frequent type of crime in Klamath Falls is crimes against property. Overall, crime has decreased significantly in Klamath Falls. It is important to note that although the number of offenses reported is higher than arrests, one offender can commit multiple offenses during a singular incident. Although the data indicates an increase in crime from 2016 to 2017, this is attributed to the Klamath Falls Police Department adopting the more stringent reporting requirements established by the Oregon National Incident Based Reporting System (NIBRS), which includes seven additional categories.

CRIME PREVENTION
**SOCIAL AND ECONOMIC FACTORS**

**HOMELESSNESS**

Every year, there is a nationwide count of the homeless population. The Point-in-Time count includes both sheltered and unsheltered adults and youth. In Klamath County, the total count of homeless individuals decreased from 252 in 2015 to 192 in 2017. Of those individuals, 114 were sheltered, while 78 were not. From the total count, the number of homeless youth in Klamath County decreased from 37 in 2015 to 22 in 2017. In 2017, 19 of those youth were sheltered, while 3 were not.

**DISCONNECTED YOUTH**

Disconnected youth is the percentage of teens and young adults ages 16-24 who are neither working nor in school. Disconnected youth are at an increased risk of violent behavior, smoking, alcohol consumption and marijuana use, and may have emotional deficits and less cognitive and academic skill than their peers who are working and/or in school.

**EDUCATION**

Studies show that individuals with higher education tend to be healthier and have greater financial stability in adulthood. Education levels also impact how long someone lives. Life expectancy is approximately a decade shorter for people who do not have a high school degree compared to those who have completed college. According to the Centers for Disease Control, college graduates are also healthier with lower rates of obesity and smoking compared to those who do not complete high school.

The four year high school graduation rate has improved for both school districts in the county. The Klamath County School District had an increase from 68% for the 2013-2014 school year to 79% for the 2017-2018 school year, while the Klamath Falls City Schools had an increase from 44% to 63%.

Years of formal education has the strongest correlation with health and is thought to be related to work and economic opportunities, psychological resources, and a healthier lifestyle. 27% of people living in Klamath County have some college, which is the percentage of the population ages 25-44 with some post-secondary education, such as enrollment in vocational/technical schools, junior colleges, or four-year colleges. It includes individuals who pursued education following high school but did not receive a degree. Additionally, a parent’s education level is linked to their child’s health and educational attainment. Children whose mothers graduated from college are twice as likely to live past their first birthday. Children who have parents with lower levels of education often experience more stress and poor health early in life. This is linked to decreased cognitive development, increased tobacco and drug use, and a higher risk of heart disease, diabetes, depression, and other conditions.

**Klamath County Disconnected Youth**

19%

27% of the population in Klamath County have some college.
The economic condition of a community and an individual’s level of educational attainment both play important roles in shaping employment opportunities. Often times more education leads to a better job and higher salary. Higher paying jobs are more likely than lower paying jobs to provide workers with safe work environments and offer benefits such as health insurance, paid sick leave, and worksite wellness programs, which support healthy lifestyle choices. Unemployment and under employment can limit these benefits, which negatively affects quality of life and overall health.

The County Health Rankings reports that nearly 10 million workers in the United States are part of the “working poor”. This population works fulltime but has limited income, which affects the ability to afford necessary benefits. The working poor are less likely to have health insurance or access to preventative care, are more likely to work in hazardous jobs, and may be unable to afford quality child care, than those with a higher income.

Those who are unemployed face even greater challenges that affect health and well-being, including lost income and, often, health insurance. Unemployment is the percentage of the civilian labor force, age 16 and older, that is unemployed but seeking work. Unemployed individuals are more likely to be in poor or fair health than individuals who are employed. Unemployment has been shown to lead to an increase in unhealthy behaviors related to alcohol and tobacco consumption, diet, exercise, and other health-related behaviors, which increases the risk for heart disease, high blood pressure, and depression, among other health issues. The statistics below highlight those at an economic disadvantage in Klamath County.

### INCOME

Income from various sources such as jobs, investments, government programs, and retirement can affect economic choices. These economic decisions often pertain to housing, education, child care, and more. Income also plays a role in differences in life expectancy. The ongoing stress and challenges associated with poverty can lead to cumulative health damage, both physical and mental. Illness is also more prevalent among children from low income families than their higher income counterparts. Mothers who qualify as low income are more likely to have pre-term or low birth weight babies who are at higher risk for chronic disease and behavioral problems. Childhood poverty is also a predictor of adverse health outcomes. During early childhood development, poverty can take a toll on mental health and brain development, making children susceptible to health conditions like ADHD, behavioral disorders, and anxiety, which can negatively impact learning abilities and social skills. Overall, poverty can increase the risk for depression, chronic conditions, and mortality.
Clean air and safe water are essential for good health. Poor air or water quality can be particularly damaging to vulnerable populations such as the very young, the elderly, and those with chronic health conditions. Clean air and water play a major role in healthy brain and body function, growth, and development. Various forms of air pollutants such as fine particulate matter, ground-level ozone, carbon monoxide and greenhouse gases can be detrimental to health and the environment. It has been well documented that air pollution damages airways and lungs, contributes to respiratory conditions and diseases, and increases the risk of premature death from heart or lung disease.

Klamath County Public Health actively works with the community to meet the Environmental Protection Agency’s air quality standard for fine particulate matter (PM2.5) of 35.4 µg/m³. This is measured using the highest value for the year averaged over three years. During the measurement period from 2014-2016, Klamath County met the EPA standard with a high average PM2.5 of 27.67 µg/m³. Some events such as forest fires were excluded from the measurement. However, the negative health effects from the smoke exposure and the impact on livability in the area remains.

There is a housing crisis in Oregon, leaving occupants struggling to pay for housing. According to the National Low Income Housing Coalition, Oregon has the third most unaffordable rental market in the United States. The United States Department of Housing and Urban Development (HUD) classifies families who pay more than 30 percent of their income for housing as cost burdened. Severe cost burden is defined as monthly housing costs, including utilities, that exceed 50% of monthly income. This can affect a family’s ability to afford basic necessities, such as food, clothing, transportation, and medical care.

Severe housing problems is the percentage of households with one or more of the following housing problems:
- housing unit lacks complete kitchen facilities
- housing unit lacks complete plumbing facilities
- household is severely overcrowded
- household is severely cost burdened

Of the estimated 27,171 occupied housing units in Klamath County in 2017, 1.1%, or 303 units, lack complete kitchen facilities. While 0.6%, or 169 units, lack complete plumbing facilities. Severe overcrowding is defined as more than 1.5 persons per room. In 2017, of the 27,171 occupied housing units in Klamath County, 0.3%, or 90 units, have 1.51 or more occupants per room. Over half of renters in Klamath County pay 30% or more of their monthly income for rent.
The Walk Score measures the walkability of any address, neighborhood, or city. Walkable neighborhoods support the environment, health, and the economy. The walk score, bike score, and transit score have been assessed for Klamath Falls, Oregon. The scores range between 0 to 100, with higher scores being better.

A walk score between 25-49 means a community is car-dependent, in which most errands require a car. The walk score is based on the walking distance to amenities. It also measures pedestrian friendliness based on population density and road metrics, which includes block length and intersection density.

A bike score between 0-49 means a community is somewhat bikeable, with minimal bike infrastructure, which includes lanes and trails. The bike score determines how bike friendly a community is based on infrastructure and road connectivity, hills, and the number of bike commuters.

A transit score between 25-49 means a community has some transit, with a few public transportation options. The transit score measures how well a location is served by public transit. The transit score looks at the frequency, type of route, and distance to the nearest stop on the route.

Cities, counties, and states receive a score based on the average scores of neighborhoods within their boundaries. Scores range from 0 to 100, with higher scores being better. Communities are compared to one another, with an average score of 50. Below-average communities score lower, while above-average communities score higher. In 2018, the Livability Index for Klamath County was 47, while the Livability Index for Oregon was 54.32

Truly livable communities offer a wide-variety of features that appeal to people of all ages, incomes, and abilities. Livable communities also meet the needs of residents as they age. The AARP Livability Index is based on the average score of seven livability categories: housing, neighborhood, transportation, environment, health, engagement, and opportunity. For each category, the index assesses conditions, policies, and programs that can improve community livability over time. The metrics and policies are related to issues such as housing affordability, access to convenient transportation, or commitment to age-friendly communities.

Klamath County Category Scores

- **Housing**: 51
  - Affordability and access
- **Neighborhood**: 38
  - Access to life, work, and play
- **Transportation**: 53
  - Safe and convenient options
- **Environment**: 59
  - Clean air and water
- **Health**: 39
  - Prevention, access and quality
- **Engagement**: 52
  - Civic and social involvement
- **Opportunity**: 40
  - Inclusion and possibilities

The Walk Score measures the walkability of any address, neighborhood, or city. Walkable neighborhoods support the environment, health, and the economy. The walk score, bike score, and transit score have been assessed for Klamath Falls, Oregon. The scores range between 0 to 100, with higher scores being better.

A walk score between 25-49 means a community is car-dependent, in which most errands require a car. The walk score is based on the walking distance to amenities. It also measures pedestrian friendliness based on population density and road metrics, which includes block length and intersection density.

A bike score between 0-49 means a community is somewhat bikeable, with minimal bike infrastructure, which includes lanes and trails. The bike score determines how bike friendly a community is based on infrastructure and road connectivity, hills, and the number of bike commuters.

A transit score between 25-49 means a community has some transit, with a few public transportation options. The transit score measures how well a location is served by public transit. The transit score looks at the frequency, type of route, and distance to the nearest stop on the route.
Part IX. Conclusion

The third iteration of the Klamath County Community Health Assessment shows the progress that has been made since the community’s concerted health improvement journey began in 2012. Nevertheless, it also demonstrates the need for continued interventions to address the community’s prevailing health issues. It can often take years to see the impact of health interventions reflected in the data. However, there are ways to monitor progress locally and experience firsthand how new policies and programs are improving the health and well-being of all community members where we live, learn, work, and play.

Moving forward, the information from this Community Health Assessment will be used to identify priority health issues and develop strategies to address them over the next three years. These strategies and the partner agencies working on them will be outlined in the 2019 Community Health Improvement Plan.

As the Healthy Klamath Coalition continues to work across sectors on numerous community health initiatives, widespread support and implementation is needed for these changes to take hold. That is how we will make the greatest impact on our community’s most pressing issues.

Appendix A: Visioning Handout

Community Health Assessment Visioning
Healthy Klamath Meeting 02/22/18

1. What community visions already exist?

2. How do you define a healthy community?

3. Where do we, as a community, see ourselves in three to five years?

4. In five years, if our community successfully worked towards achieving healthy equity, what would we have accomplished?

5. What specific values do we need to help us achieve this?
   Example: Instead of just listing participation, use involve community members in planning.

6. What are some ground rules we want to see to ensure we are all working effectively to achieve our vision?
Appendix B: FOCA Brainstorming Worksheet

Forces of Change Brainstorming Worksheet

The following two-page worksheet is designed for MAPP Committee members to use in preparing for the Forces of Change brainstorming session.

What are Forces of Change?
Forces are a broad all-encompassing category that includes trends, events, and factors.

- **Trends are patterns over time**, such as migration in and out of a community or a growing disillusionment with government.
- **Factors are discrete elements**, such as a community’s large ethnic population, an urban setting, or a jurisdiction’s proximity to a major waterway.
- **Events are one-time occurrences**, such as a hospital closure, a natural disaster, or the passage of new legislation.

What Kind of Areas or Categories Are Included?
Be sure to consider any and all types of forces, including:

- social
- economic
- political
- technological
- environmental
- scientific
- legal
- ethical

How To Identify Forces of Change
Think about forces of change — outside of your control—— that affect the local public health system or community.

1. What has occurred recently that may affect our local public health system or community?
2. What may occur in the future?
3. Are there any trends occurring that will have an impact? Describe the trends.
5. What characteristics of our jurisdiction or state may pose an opportunity or threat?
6. What may occur or has occurred that may pose a barrier to achieving the shared vision?

Also, consider whether or not forces identified were unearthed in previous discussions.

1. Was the MAPP process spurred by a specific event such as changes in funding or new trends in public health service delivery?
2. Did discussions during the Local Public Health System Assessment reveal changes in organizational activities that were the result of external trends?
3. Did brainstorming discussions during the Visioning or Community Themes and Strengths phases touch upon changes and trends occurring in the community?
Forces of Change Brainstorming Worksheet
(Page 2)

Using the information from the previous page, list all brainstormed forces, including factors, events, and trends. Continue onto another page if needed. Bring the completed worksheet to the brainstorming session

The Healthy Klamath Coalition Wants to Hear from You!

Please join us to discuss quality of life, resources to improve health in our community, and what health means to you. A light dinner will be provided.

- Wed. June 27, 2018
- 5:30 pm to 7:30 pm
- Klamath County Library
  126 S. 3rd St.
  Klamath Falls, OR 97601

Please RSVP with Erin Schulten at 541-882-8846 or email at eschulten@klamathcounty.org
Appendix E: Community Forum Questions

Healthy Klamath Community Forum Agenda
June 27, 2018

5:30 – 6:00 pm
Welcome, introductions, and overview during dinner

6:00 – 6:30 pm
1) How would you describe the quality of life in Klamath Falls and in Klamath County?
2) Are you satisfied with the quality of life in our community?
3) Do all individuals and groups have the opportunity to contribute to and participate in the community’s quality of life?

Please write the answers to these questions on the provided post-it notes.

- How would you rate the quality of life in our community? Please write your town name as well.
  - Very poor, poor, average, above average, or excellent
- What is something you value about our community?

6:30 – 7:00 pm
4) What can be done to improve health and quality of life in our community?
5) How do you think we can better engage the community in health improvement efforts?

7:00 – 7:25 pm
6) What community resources can be used to help make these changes?
7) Of the improvements and changes mentioned, what are the most important to you and why?

7:25 – 7:30 pm
Wrap up
Thank you! On behalf of the Healthy Klamath Coalition, we would like to thank you for your participation. We value your input and appreciate you taking the time to speak with us. For more information about Healthy Klamath, please visit our website at www.healthyklamath.org.
Appendix F: CHSA Survey

Klamath Community Health Survey (Version 2)

Thank you for participating in the Community Health Survey created by Healthy Klamath. We are seeking information around the health and wellness of residents of Klamath County. Please select the responses below that best apply to you.

This same survey was handed out at the Sky Lakes Medical Center Health Fair on Saturday, March 4, 2018. If you took the survey there, we already have your responses. Thank you!

Please select an animal.

If you have seen the animal question before, you have probably already taken the survey and we have your responses. Thank you!
1) Where did you take this survey?
- Health Fair
- Sky Lakes Medical Center
- Klamath Open Door (All Sites)
- Cascade Health Alliance
- Klamath County Public Health
- Klamath Tribal Health and Family Services
- Klamath Basin Behavioral Health
- Worksite
- Other - Write In: ______________

2) Where in Klamath County do you live?
- Klamath Falls
- Altamont
- Chiloquin
- Sprague River
- Bonanza
- Merrill/Malin
- Beatty/Bly
- Chemult
- Crescent/Gilchrist
- Rocky Point/Fort Klamath
- Other - Write In: ______________

3) In general would you say that your health is...
- Excellent
- Very good
- Good
- Fair
- Poor

4) Do you have reliable transportation?
- Yes
- No

5) Do you find public transportation convenient and easy to use?
- Yes
- No. (If you would like, please explain why): _______________________
- I do not use it.

6) In the past 12 months, have you worried that your food would run out before you got money to buy more?
- Never
- Seldom
- Sometimes
- Often
- Always

7) What is your housing situation today?
- I do not have housing
- I am staying with others
- I have housing
- I have housing today, but I am worried about losing housing in the future
8) In the past 12 months, have you used any of the following services? Check all that apply.

☐ Medical check up
☐ Teeth cleaning/dental exam
☐ Emergency Room (ER)
☐ Mental health
☐ Appointment for acute illness (for example, cold/flu, injury)
☐ Appointment for chronic illness (for example, heart disease, diabetes, cancer)
☐ Pharmacy
☐ Other - Write In: ________________
☐ None of the above

9) In the past 12 months, have any of the following issues kept you from using health care services? Check all that apply.

☐ Cost
☐ Transportation
☐ Insurance
☐ Childcare
☐ Work
☐ Distance/weather concerns
☐ Illness/disability
☐ Could not get an appointment
☐ Other - Write In: ________________
☐ None of these

10) If there was an issue that kept you from using health care services, which of the following were you unable to use? Check all that apply.

☐ Medical check up
☐ Teeth cleaning/dental exam
☐ Emergency Room (ER)
☐ Mental health
☐ Appointment for acute illness (for example, cold/flu, injury)
☐ Appointment for chronic illness (for example, heart disease, diabetes, cancer)
☐ Pharmacy
☐ Other - Write In: ________________
☐ None of the above
☐ Not applicable

11) In the past 30 days have you had a medical, dental, or mental health appointment that you missed or skipped?

☐ Yes
☐ No
☐ I did not have an appointment
12) In the past 30 days, how often did mental health concerns (e.g. depression, anxiety, other mental health issue, etc.) make it hard for you to do your usual activities, such as self-care or work?

□ Never  □ Seldom  □ Sometimes  □ Often  □ Always

13) In the past 30 days, how often did pain make it hard for you to do your usual activities, such as self-care or work?

□ Never  □ Seldom  □ Sometimes  □ Often  □ Always

14) If you are a member of Cascade Health Alliance, have you been offered case management?

□ Not applicable  □ Yes  □ No  □ I don't know

15) Is there anything you feel is keeping you from having better health? Check all that apply.

□ Chronic illness  □ Mental health issue  □ Alcohol use  □ Access to healthcare  □ Tobacco use  □ Lack of healthy foods  □ Lack of physical activity  □ Cost  □ Geographic isolation  □ Social isolation  □ Abuse or violence  □ Other - Write In: ________________  □ None of the above

16) What is your age?

□ Under 18  □ 18-24  □ 25-34  □ 35-44  □ 45-54  □ 55-64  □ 65-74  □ 75 or older  □ Prefer not to answer
17) What is the highest level of education you have completed?
- Some high school, elementary school, or less
- High school diploma/GED
- Some college
- Trade school/Certificate
- Associate's Degree
- Bachelor's Degree or higher
- Prefer not to answer

18) How many people usually live in your household?
- 1
- 2
- 3
- 4
- 5
- 6
- 7 or more
- Prefer not to answer

19) What is your household income?
- Less than $20,000
- $20,000 to $34,999
- $35,000 to $49,999
- $50,000 to $74,999
- $75,000 to $99,999
- $100,000 or more
- Prefer not to answer

20) What type of health insurance do you have?
- Private insurance
- Employer sponsored
- Medicaid (Oregon Health Plan, Open Card)
- Medicare
- TRICARE
- Veterans Affairs (VA)
- Indian Health Service (IHS)
- Other - Write In: __________________
- No insurance
- Prefer not to answer

21) What is your employment status?
- Full time employed
- Part time employed
- Self-employed
- Unable to work due to medical condition, disability, etc.
- Out of work and looking for work
- Out of work but not currently looking for work
- Other (homemaker, student, retired)
- Prefer not to answer

22) What is your gender identity?
- Male
- Female
- Transgender
- Other - Write In: __________________
- Prefer not to answer
23) How would you describe your sexual orientation?
- Heterosexual (straight)
- Gay/Lesbian
- Bisexual
- Other - Write In: ________________
- Prefer not to answer

24) What is your race?
- White
- Black or African American
- Native American or Alaska Native
- Asian/Pacific Islander
- Multiracial
- Other
- Prefer not to answer

25) Do you identify as Hispanic or Latina/o?
- Yes
- No
- Prefer not to answer

26) Select all the languages spoken in your home:
- English
- Spanish
- Other - Write In: ________________
- Prefer not to answer

Thank You!

Thank you for taking the Klamath Community Health Survey. Your response is very important to us.
Encuesta de salud comunitaria de Klamath (Versión 2)

Gracias por participar en la Encuesta de salud comunitaria creada por Healthy Klamath. Estamos buscando información sobre la salud y el bienestar de los residentes del Condado de Klamath. Selecione las respuestas a continuación que mejor se apliquen a usted.

Esta misma encuesta se entregó en la Feria de Salud del Centro Médico Sky Lakes el sábado 4 de marzo de 2018. Si realizó la encuesta allí, ya tenemos sus respuestas. ¡Gracias!

Por favor seleccione un animal.

Si ya ha visto la pregunta del animal, probablemente ya tomó la encuesta y tenemos sus respuestas. ¡Gracias!
1) ¿Dónde tomaste esta encuesta?

☐ Feria de la salud
☐ Centro Médico Sky Lakes
☐ Klamath Open Door (Todos los sitios)
☐ Cascade Health Alliance
☐ Klamath County Public Health
☐ Klamath Tribal Health & Family Services
☐ Klamath Basin Behavioral Health
☐ Sitio de trabajo
☐ Otro - Escribir en: _____________

2) ¿Dónde vives en el condado de Klamath?

☐ Klamath Falls
☐ Altamont
☐ Chiloquin
☐ Sprague River
☐ Bonanza
☐ Merrill / Malin
☐ Beatty / Bly
☐ Chemult
☐ Crescent / Gilchrist
☐ Rocky Point / Fort Klamath
☐ Otro - Escribir en: _____________

3) En general, dirías que tu salud es....

☐ Excelente
☐ Muy bien
☐ Bueno
☐ Justa
☐ Pobre

4) ¿Tiene transporte confiable?

☐ Sí
☐ No

5) ¿Encuentra el transporte público conveniente y fácil de usar?

☐ Sí
☐ No. (Si lo desea, explique por qué): ________________________________
☐ No lo uso.

6) En los últimos 12 meses, ¿te ha preocupado que tu comida se agote antes de que tengas dinero para comprar más?

☐ Nunca
☐ Raramente
☐ A veces
☐ A menudo
☐ Siempre
7) ¿Cuál es su situación de vivienda hoy?
- No tengo vivienda
- Me quedo con otros
- Tengo vivienda
- Tengo viviendas hoy, pero me preocupa perder viviendas en el futuro

8) En los últimos 12 meses, ¿ha utilizado alguno de los siguientes servicios? Marque todo lo que corresponda.
- Revisión médica
- Limpieza dental / examen dental
- Sala de emergencias (ER)
- Salud mental
- Cita para enfermedad aguda (por ejemplo, resfriado / gripe, lesión)
- Cita para enfermedades crónicas (por ejemplo, enfermedad cardíaca, diabetes, cáncer)
- Farmacia
- Otro - Escribir en: __________
- Ninguna de las anteriores

9) En los últimos 12 meses, ¿alguna de las siguientes cuestiones le impidió usar los servicios de atención médica? Marque todo lo que corresponda.
- Costo
- Transporte
- Seguro
- Cuidado de niños
- Trabajo
- Preocupaciones de distancia / tiempo
- Enfermedad / discapacidad
- No se pudo obtener una cita
- Otro - Escribir en: __________
- Ninguno de esos
10) Si hubo un problema que le impidió usar los servicios de atención médica, ¿cuál de los siguientes no pudo usar? Marque todo lo que corresponda.

☐ Revisión médica
☐ Limpieza dental / examen dental
☐ Sala de emergencias (ER)
☐ Salud mental
☐ Cita para enfermedad aguda (por ejemplo, resfriado / gripe, lesión)
☐ Cita para enfermedades crónicas (por ejemplo, enfermedad cardíaca, diabetes, cáncer)
☐ Farmacia
☐ Otro - Escribir en: ______________
☐ Ninguna de las anteriores
☐ No aplica

11) En los últimos 30 días, ¿ha tenido una cita médica, dental o de salud mental que se perdió u omitió?

☐ Sí
☐ No
☐ No tuve una cita

12) En los últimos 30 días, ¿con qué frecuencia problemas de salud mental (por ejemplo, depresión, ansiedad, otro problema de salud mental, etc.) hacen que sea difícil para que usted pueda realizar sus actividades habituales, como el autocuidado o el trabajo?

☐ Nunca
☐ Raramente
☐ A veces
☐ A menudo
☐ Siempre

13) En los últimos 30 días, ¿con qué frecuencia el dolor le dificultó realizar sus actividades habituales, como el cuidado personal o el trabajo?

☐ Nunca
☐ Raramente
☐ A veces
☐ A menudo
☐ Siempre

14) Si es miembro de Cascade Health Alliance, ¿le han ofrecido la administración de casos?

☐ No aplica
☐ Sí
☐ No
☐ No lo sé
15) ¿Hay algo que sientes que te impide tener una mejor salud? Marque todo lo que corresponda.
- Enfermedad crónica
- Problema de salud mental
- Consumo de alcohol
- Acceso a la asistencia sanitaria
- El consumo de tabaco
- La falta de alimentos saludables
- Falta de actividad física
- Costo
- Aislamiento geográfico
- Aislamiento social
- Abuso o violencia
- Otro - Escribir en: _______________
- Ninguna de las anteriores

16) ¿Cuál es tu edad?
- Menores de 18 años
- 18-24
- 25-34
- 35-44
- 45-54
- 55-64
- 65-74
- 75 o más edad
- Prefiero no responder

17) ¿Cuál es el nivel más alto de educación que ha completado?
- Un poco de escuela secundaria, escuela primaria, o menos
- Diploma de secundaria / GED
- Alguna educación superior
- Escuela de Comercio / Certificado
- Grado Asociado
- Título universitario de primer ciclo o superior
- Prefiero no responder

18) ¿Cuántas personas suelen vivir en su hogar?
- 1
- 2
- 3
- 4
- 5
- 6
- 7 o más
- Prefiero no responder

19) ¿Cuál es el ingreso de su hogar?
- Menos de $ 20,000
- $ 20,000 a $ 34,999
- $ 35,000 a $ 49,999
- $ 50,000 a $ 74,999
- $ 75,000 a $ 99,999
- $ 100,000 o más
- Prefiero no responder
20) ¿Qué tipo de seguro de salud tienes?
- Seguro privado
- Patrocinado por el empleador
- Medicaid (Plan de Salud de Oregon, Tarjeta Abierta)
- Seguro médico del estado
- TRICARE
- Asuntos de Veteranos (VA)
- Servicio de Salud Indígena (IHS)
- Otro - Escribir en: _____________
- Sin seguro
- Prefiero no responder

21) ¿Cuál es su estado de empleo?
- Empleado a tiempo completo
- Tiempo parcial empleado
- Trabajadores por cuenta propia
- Incapaz de trabajar debido a una condición médica, discapacidad, etc.
- Sin trabajo y buscando trabajo
- Sin trabajo, pero que actualmente no busca trabajo
- Otro (ama de casa, estudiante, jubilado)
- Prefiero no responder

22) ¿Cuál es tu identidad de género?
- Masculino
- Femenino
- Transgénero
- Otro - Escribir en: _____________
- Prefiero no responder

23) ¿Cómo describirías tu orientación sexual?
- Heterosexual (derecho)
- Gay / Lesbian
- Bisexual
- Otro - Escribir en: _____________
- Prefiero no responder

24) ¿Cuál es tu raza?
- Blanco
- Negro o afroamericano
- Nativo americano o nativo de Alaska
- Asiático / Islas del Pacífico
- Multirracial
- Otro
- Prefiero no responder

25) ¿Se identifica como hispano o latino / o?
- Sí
- No
- Prefiero no responder
26) Seleccione todos los idiomas que se hablan en su hogar:

☐ Inglés
☐ Español
☐ Otro - Escribir en: _______________
☐ Prefiero no responder

¡Gracias!
Gracias por tomar la Encuesta de salud comunitaria de Klamath. Tu respuesta es muy importante para nosotros.
Appendix G: LPHSA Survey

Introduction

The Local Public Health System is made up of all public, private and voluntary organizations that contribute to the delivery of public health and safety services in a community.

The Local Public Health System Assessment (LPHSA) is designed around the 10 Essential Public Health Services. All public health responsibilities, whether conducted by Klamath County Public Health or another organization in the community, can be categorized into one of these services.

This survey will go through each of the 10 Essential Public Health Services to determine areas of strength, as well as areas for improvement. Your participation in the LPHSA helps us to measure how well we are collectively delivering these essential services in our community.

1. Organization

Section 1: Monitor Health

Monitor Health Status to Identify and Solve Community Health Problems
To what extent does your organization...

2. Conduct regular Community Health Assessments?

<table>
<thead>
<tr>
<th>Never</th>

7. Prepare to rapidly respond to public health emergencies according to emergency operations coordination guidelines?

<table>
<thead>
<tr>
<th>Never</th>
<th>Rarely</th>
<th>Occasionally</th>
<th>Frequently</th>
<th>Very Frequently</th>
<th>N/A</th>
</tr>
</thead>
</table>

---

Section 3: Inform, Educate, and Empower

Inform, Educate, and Empower People about Health Issues

To what extent does your organization...

8. Engage the community through the process of setting priorities, developing plans, and implementing health education and health promotion activities?

<table>
<thead>
<tr>
<th>Never</th>
<th>Rarely</th>
<th>Occasionally</th>
<th>Frequently</th>
<th>Very Frequently</th>
<th>N/A</th>
</tr>
</thead>
</table>

9. Provide policymakers, stakeholders, and the public with ongoing analyses of community health status and recommendations for health promotion policies?

<table>
<thead>
<tr>
<th>Never</th>
<th>Rarely</th>
<th>Occasionally</th>
<th>Frequently</th>
<th>Very Frequently</th>
<th>N/A</th>
</tr>
</thead>
</table>

10. Reach their target audience through different media providers (i.e. internet, radio, television, etc.)

<table>
<thead>
<tr>
<th>Never</th>
<th>Rarely</th>
<th>Occasionally</th>
<th>Frequently</th>
<th>Very Frequently</th>
<th>N/A</th>
</tr>
</thead>
</table>
Section 4: Mobilize Community Partnerships

Mobilize Community Partnerships to Identify and Solve Health Issues

To what extent does your organization...

11. Follow an established process for identifying key community members related to overall public health and safety interests and particular health concerns?

<table>
<thead>
<tr>
<th>Never</th>
<th>Rarely</th>
<th>Occasionally</th>
<th>Frequently</th>
<th>Very Frequently</th>
<th>N/A</th>
